

It's not important, it only controls your *entire* station.

ANDI

The Station Site Controller.

Your Station Site Controller (SSC) is the most critical piece of equipment in your station. Without it nothing runs. It controls dispensers, credit transactions, tank monitoring systems, car washes, POS devices and business software interfaces. That is why so many turn to ANDI, the industry leader.

ANDI is the most implemented SSC in the US today. We are the most compatible, and most reliable—bar none. We provide unparalleled service and support nationwide and are installed at most major oil companies across the nation.

ANDI's powerful open architecture is designed to handle upgrades for years to come. We also work with all leading station component manufacturers to incorporate new technologies into ANDI before they reach the field—a real testimony to our forward thinking.

So, when you are ready to upgrade or build a new station start the equipment list with ANDI. Call 1-800-223-3619 or (215) 785-6200 and find out more about ANDI.

The following POS vendors support the ANDI interface:

ANDI features and specifications list.

Features:
